

SP20

Compact 2" discharge Trash Pump

The SP 20 is a compact yet powerful trash pump with flow capacity up to 200 gpm and water heads up to 115 feet. It is a lightweight but capable tool that can pump solid objects with dimension up to one inch diameter and can also pump thick and muddy liquids. The SP 20 is robust with a pump body of hardened stainless steel and an impeller of high chromium cast iron, materials that assure high resistance to impacts and abrasion. The small dimension and weight of the SP 20 allows insertion of the pump into the smallest manholes or trenches. Compact, reliable and safe, the SP 20 is ideal for maintenance work in utility networks and for smaller construction projects.

ADVANTAGES

- Unbeatable power/size/weight ratio
- Ability to run dry without damages
- Robust construction and minimal maintenance needs
- Durability, versatility thanks to the possibility to be powered by small power packs, mini excavator, jeeps and trucks, fire fighting and rescue vehicles
- Implicit safety thanks to the absence of electricity
- Submersible design means zero problems of priming
